SPECIFICATIONS FOR NICHIA CHIP TYPE **GREEN** LED MODEL : **NSCG100**

NICHIA CORPORATION

1.SPECIFICATIONS

(1) Absolute Maximum Ratings

 $(Ta=25^{\circ}C)$

1) 1 10001000 1/1001111100111 1100111100				
Item	Symbol	Absolute Maximum Rating	Unit	
Forward Current	IF	25	mA	
Pulse Forward Current	IFP	80	mA	
Reverse Voltage	VR	5	V	
Power Dissipation	PD	100	mW	
Operating Temperature	Topr	- 20 ∼ + 85	°C	
Storage Temperature	Tstg	- 30 ∼ +100	°C	
Soldering Temperature	Tsld	Reflow Soldering: 240°C	for 10sec.	
		Hand Soldering : 300°C	for 3sec.	

IFP Conditions : Pulse Width ≤ 10 msec. and Duty $\leq 1/10$

(2) Initial Electrical/Optical Characteristics

 $(Ta=25^{\circ}C)$

Item		Symbol	Condition	Min.	Тур.	Max.	Unit
Forward Voltage		VF	I _F =20[mA]	ı	3.5	4.0	V
Reverse Current		Ir	$V_R = 5[V]$	-	-	50	μA
	Rank T	Iv	IF=20[mA]	560	640	780	mcd
Luminous Intensity	Rank S	Iv	IF=20[mA]	390	460	560	mcd
	Rank R	Iv	IF=20[mA]	280	320	390	mcd

[★] Measurement Uncertainty of the Luminous Intensity: ± 10%

Color Ranks

 $(I_F=20mA, Ta=25^{\circ}C)$

	Rank G					
X	0.14	0.14	0.22	0.22		
y	0.64	0.74	0.74	0.64		

	Rank H					
X	0.21	0.21	0.28	0.28		
y	0.65	0.73	0.73	0.65		

^{*} Measurement Uncertainty of the Color Coordinates : ± 0.01

2.TYPICAL INITIAL OPTICAL/ELECTRICAL CHARACTERISTICS

Please refer to figure's page.

3.OUTLINE DIMENSIONS AND MATERIALS

Please refer to figure's page.

Material as follows; Package : Ceramics

Encapsulating Resin : Epoxy Resin Electrodes : Au Plating

^{*} One delivery will include up to two color ranks and three luminous intensity ranks of the products. The quantity-ratio of the ranks is decided by Nichia.

4.PACKAGING

• The LEDs are packed in cardboard boxes after taping. According to the total delivery amount, cardboard boxes will be used to protect the LEDs from mechanical shocks during transportation. Please refer to figure's page. The label on the minimum packing unit bag shows;

Part Number, Lot Number, Ranking, Quantity

· The boxes are not water resistant and therefore must be kept away from water and moisture.

5.LOT NUMBER

The first six digits number shows **lot number**.

The lot number is composed of the following characters;

 $\bigcirc \square \times \times \times \times - \triangle \blacksquare$

O - Year (1 for 2001, 2 for 2002)

☐ - Month (1 for Jan., 9 for Sep., A for Oct., B for Nov.)

 $\times \times \times \times$ - Nichia's Product Number

 \triangle - Ranking by Color Coordinates

Ranking by Luminous Intensity

6.RELIABILITY

(1) TEST ITEMS AND RESULTS

	Standard			Number of
Test Item	Test Method	Test Conditions	Note	Damaged
Resistance to	JEITA ED-4701	Tsld=240°C, 10sec.	1 time	0/100
Soldering Heat	300 301	(Pre treatment 30°C,70%,168hrs.)		
(Reflow Soldering)				
Thermal Shock	JEITA ED-4701	0°C ~ 100°C	20 cycles	0/100
	300 307	15sec. 15sec.	-	
Temperature Cycle	JEITA ED-4701	-30°C ~ 25°C ~ 100°C ~ 25°C	20 cycles	0/100
	100 105	30min. 5min. 30min. 5min.	-	
Moisture Resistance Cyclic	JEITA ED-4701	25°C ~ 65°C ~ -10°C	10 cycles	0/100
-	200 203	90%RH 24hrs./1cycle	-	
High Temperature Storage	JEITA ED-4701	Ta=100°C	1000 hrs.	0/100
	200 201			
Temperature Humidity	JEITA ED-4701	Ta=60°C, RH=90%	1000 hrs.	0/100
Storage	100 103			
Low Temperature Storage	JEITA ED-4701	Ta=-30°C	1000 hrs.	0/100
	200 202			
Steady State Operating Life		Ta=25°C, IF=20mA	1000 hrs.	0/100
Steady State Operating Life		60°C, RH=90%, IF=15mA	500 hrs.	0/100
of High Humidity Heat		•		
Steady State Operating Life		Ta=-20°C, IF=20mA	1000 hrs.	0/100
of Low Temperature				

(2) CRITERIA FOR JUDGING THE DAMAGE

			Criteria for	Judgement
Item	Symbol	Test Conditions	Min.	Max.
Forward Voltage	VF	IF=20mA	-	U.S.L.*)× 1.1
Reverse Current	IR	V _R =5V	-	U.S.L.*)× 2.0
Luminous Intensity	Iv	I _F =20mA	$L.S.L.**) \times 0.7$	-

^{*)} U.S.L.: Upper Standard Level

^{**)} L.S.L.: Lower Standard Level

7.CAUTIONS

(1) Moisture Proof Package

- · When moisture is absorbed into the SMT package it may vaporize and expand during soldering. There is a possibility that this can cause exfoliation of the contacts and damage to the optical characteristics of the LEDs. For this reason, the moisture proof package is used to keep moisture to a minimum in the package.
- The moisture proof package is made of an aluminum moisture proof bag with a zipper. A package of a moisture absorbent material (silica gel) is inserted into the aluminum moisture proof bag. The silica gel changes its color from blue to pink as it absorbs moisture.

(2) Storage

· Storage Conditions

Before opening the package:

The LEDs should be kept at 30°C or less and 90%RH or less. The LEDs should be used within a year. When storing the LEDs, moisture proof packaging with absorbent material (silica gel) is recommended.

After opening the package:

The LEDs should be kept at 30°C or less and 70%RH or less. The LEDs should be soldered within 168 hours (7days) after opening the package. If unused LEDs remain, they should be stored in moisture proof packages, such as sealed containers with packages of moisture absorbent material (silica gel). It is also recommended to return the LEDs to the original moisture proof bag and to reseal the moisture proof bag again.

· If the moisture absorbent material (silica gel) has faded away or the LEDs have exceeded the storage time, baking treatment should be performed using the following conditions.

Baking treatment : more than 24 hours at 65 ± 5 °C

- · Nichia LED electrode sections are comprised of a gold plated. The gold surface may be affected by environments which contain corrosive gases and so on. Please avoid conditions which may cause the LED to corrode, tarnish or discolor. This corrosion or discoloration may cause difficulty during soldering operations. It is recommended that the User use the LEDs as soon as possible.
- · Please avoid rapid transitions in ambient temperature, especially in high humidity environments where condensation can occur.

(3) Heat Generation

- Thermal design of the end product is of paramount importance. Please consider the heat generation of the LED when making the system design. The coefficient of temperature increase per input electric power is affected by the thermal resistance of the circuit board and density of LED placement on the board, as well as other components. It is necessary to avoid intense heat generation and operate within the maximum ratings given in this specification.
- · The operating current should be decided after considering the ambient maximum temperature of LED.

(4) Soldering Conditions

• The LEDs can be soldered in place using the reflow soldering method. Nichia cannot make a guarantee on the LEDs after they have been assembled using the dip soldering method.

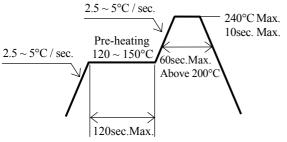

· Recommended soldering conditions

	Reflow Soldering	Hand S	oldering
Pre-heat	120 ∼ 150°C	Temperature	300°C Max.
Pre-heat time	120 seconds Max.	Soldering time	3 seconds Max.
Peak temperature	240°C Max.		(one time only)
Soldering time	10 seconds Max.		
Condition	refer to Temperature- profile.		

^{*} After reflow soldering rapid cooling should be avoided.

[Temperature-profile (Surface of circuit board)] Use the following conditions shown in the figure.

[Recommended soldering pad design]
Use the following conditions shown in the figure.

- · Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used. It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.
- · Reflow soldering should not be done more than one time.
- · When soldering, do not put stress on the LEDs during heating.
- · After soldering, do not warp the circuit board.

(5) Cleaning

- It is recommended that isopropyl alcohol be used as a solvent for cleaning the LEDs. When using other solvents, it should be confirmed beforehand whether the solvents will dissolve the package and the resin or not. Freon solvents should not be used to clean the LEDs because of worldwide regulations.
- · Do not clean the LEDs by the ultrasonic. When it is absolutely necessary, the influence of ultrasonic cleaning on the LEDs depends on factors such as ultrasonic power and the assembled condition. Before cleaning, a pre-test should be done to confirm whether any damage to the LEDs will occur.

(6) Static Electricity

- · Static electricity or surge voltage damages the LEDs.

 It is recommended that a wrist band or an anti-electrostatic glove be used when handling the LEDs.
- · All devices, equipment and machinery must be properly grounded.

 It is recommended that measures be taken against surge voltage to the equipment that mounts the LEDs.
- · When inspecting the final products in which LEDs were assembled, it is recommended to check whether the assembled LEDs are damaged by static electricity or not. It is easy to find static-damaged LEDs by a light-on test or a VF test at a lower current (below 1mA is recommended).
- · Damaged LEDs will show some unusual characteristics such as the leak current remarkably increases, the forward voltage becomes lower, or the LEDs do not light at the low current.

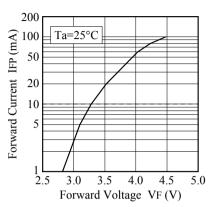

Criteria: (VF > 2.0V at IF=0.5mA)

(7) Others

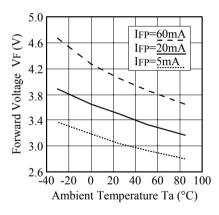

- · Care must be taken to ensure that the reverse voltage will not exceed the absolute maximum rating when using the LEDs with matrix drive.
- The LED light output is strong enough to injure human eyes. Precautions must be taken to prevent looking directly at the LEDs with unaided eyes for more than a few seconds.
- The LEDs described in this brochure are intended to be used for ordinary electronic equipment (such as office equipment, communications equipment, measurement instruments and household appliances). Consult Nichia's sales staff in advance for information on the applications in which exceptional quality and reliability are required, particularly when the failure or malfunction of the LEDs may directly jeopardize life or health (such as for airplanes, aerospace, submersible repeaters, nuclear reactor control systems, automobiles, traffic control equipment, life support systems and safety devices).
- · User shall not reverse engineer by disassembling or analysis of the LEDs without having prior written consent from Nichia. When defective LEDs are found, the User shall inform Nichia directly before disassembling or analysis.
- · The formal specifications must be exchanged and signed by both parties before large volume purchase begins.
- The appearance and specifications of the product may be modified for improvement without notice.
