

PARA LIGHT ELECTRONICS CO., LTD.

4F, No.1, Lane 93, Chien Yi Road, Chung Ho City, Taipei, Taiwan. Tel: 886-2-2225-3733 Fax: 886-2-2225-4800 E-mail: para@para.com.tw http://www.para.com.tw

L-813ED

REV:A/1

PACKAGE DIMENSIONS

ITEM	MATERIALS
RESIN	Epoxy Resin
LEAD FRAME	Sn Plating iron Alloy

Note:

- 1.All Dimensions are in millimeters.
- 2.Tolerance is ±0.25mm(0.010 ") Unless otherwise specified.
- 3.Protruded resin under flange is 1.5mm(0.059 ") max.
- 4.Lead spacing is measured where the leads emerge from the package.
- 5.Specification are subject to change without notice
- 6.The lamps have sharp and hard points that may injure human eyes or fingers etc., so please pay enough care in the handling.

DRAWING NO. : DS-38-03-0011

DATE : 2006-11-09

REV:A/1

FEATURES

- * 8.0mm DIA LED LAMP
- * LOW POWER CONSUMPTION.
- * I.C. COMPATIBLE.
- * LONG LIFE-SOLIDSTATE.
- * Pb FREE PRODUCTS
- * ROHS

CHIP MATERIALS

- * Dice Material : GaAsP/GaP
- * Light Color : HI.EFFI RED
- * Lens Color : RED DIFFUSED

ABSOLUTE MAXIMUM RATING : (Ta = 25°C)

	· · · · · · · · · · · · · · · · · · ·			
SYMBOL	PARAMETER	HI.EFFI RED	UNIT	
PD	Power Dissipation Per Chip	85	mW	
VR	Reverse Voltage Per Chip	5	V	
laf	Continuous Forward Current Per Chip	30	mA	
IPF	Peak Forward Current Per Chip (Duty $-0.1,1$ KHz)	120	mA	
_	Derating Linear From 25°C Per Chip	0.40	mA/°C	
Topr	Operating Temperature Range	-25°C to 85°C		
Tstg	Storage Temperature Range	-40°C to 85°C		

ELECTRO-OPTICAL CHARACTERISTICS : (Ta = 25°C)

SYMBOL	PARAMETER	TEST CONDITION	MIN.	TYP.	MAX.	UNIT
VF	Forward Voltage	IF = 20mA		2.1	2.8	V
IR	Reverse Current	VR = 5V			100	μA
λD	Dominant Wavelength	IF = 20mA		622		nm
Δλ	Spectral Line Half-Width	IF = 20mA		35		nm
201/2	Half Intensity Angle	IF = 20mA		150		deg
١v	Luminous Intensity	IF = 20mA		10		mcd

•SOLDERING

•30LDERIN	5						
METHOD	SOLDERING CONDITIONS	REMARK					
DIP SOLDERING	Bath temperature: 260℃ Immersion time: with 5 sec, 1 time	 Solder no closer than 3mm from the base of the package Using soldering flux," RESIN FLUX" is recommended. Attached data of temperatuare cure for your reference 					
SOLDERING IRON	Soldering iron: 30W or smaller Temperature at tip of iron: 260℃ or lowe Soldering time: within 5 sec.	transferred directly to the lead, hold the lead with a pair of tweezers while soldering					
-	-	e package is fixed with a panel (See Fig.1),					
be careful not	t to stress the leads with iron tip.						
2) When solderi	C Panel (Fig. 1)						
	ng wire to the lead, work with a Fig (See						
Leave a cle	slight arance	s (Fig. 2)					
Regarding solution in the tinning oven for product-tinning, compound sub-solution made of tin & copper and sliver is proposed with the temperature of Celsius 260. The proportion of the alloyed solution is tin 95.5: copper 3.5: silver 0.5 by percentage. The time of tinning is constantly 3 seconds.

8.0 mm DIA LED LAMP

L-813ED

REV:A/1

3) Similarly, when a jig is used to solder the LED to PC board, take care as much as possible to avoid steering the leads (See Fig.3).

- 4) Repositioning after soldering should be avoided as much as possible. If inevitable, be sure to preserve the soldering conditions with irons stated above: select a best-suited method that assures the least stress to the LED.
- Lead cutting after soldering should be performed only after the LED temperature has returned to normal temperature.

• STORAGE

- 1) The LEDs should be stored at 30 $^\circ$ C or less and 70% RH or less after being shipped from PARA and the storage life limits are 3 months .
- 2) PARA LED lead frames are comprised of a stannum plated iron alloy. The silver surface may be affected by environments which contain corrosive gases and so on. Please avoid conditions which may cause the LEDs to corrode, tarnish or discolor. This corrosion or discoloration may cause difficulty during soldering operations. It is recommended that the LEDs be used as soon as possible.

Please avoid rapid transitions in ambient temperature, especially, in high humidity environments where condensation can occur.

REV:A/1

•LED MOUNTING METHOD

3) When mounting the LED by using a case, as shown Fig.4, ensure that the mounting holds on the PC board match the pitch of the leads correctly-tolerance of dimensions of the respective components including the LED should be taken into account especially when designing the case, PC board, etc. to prevent pitch misalignment between the leads and board holes, the diameter of the board holes should be slightly larger than the size of the lead. Alternatively, the shape of the holes should be made oval. (See Fig.4)

4) Use LEDs with stand-off (Fig.5) or the tube or spacer made of resin (Fig.6) to position the LEDs.

Fig.5

DATE : 2006-11-09

L-813ED

REV:A/1

•FORMED LEAD

1) The lead should be bent at a point located at least 2mm away from the package. Bending should be performed with base fixed means of a jig or pliers (Fig.7)

- 2) Forming lead should be carried our prior to soldering and never during or after soldering.
- Form the lead to ensure alignment between the leads and the hole on board, so that stress against the LED is prevented. (Fig.8)

•LEAD STRENGTH

1) Bend strength

Do not bend the lead more than twice. (Fig.9)

DRAWING NO. : DS-38-03-0011

DATE : 2006-11-09

L-813ED

REV:A/1

Tensile strength (@Room Temperature)
 If the force is 1kg or less, there will be no problem. (Fig.10)

OK!

• HEAT GENERATION

1) Thermal design of the end product is of paramount importance. Please consider the heat generation of the LED when making the system design. The coefficient of temperature increase per input electric power is affected by the thermal resistance of the circuit board and density of LED placement on the board, as well as other components. It is necessary to avoid intense heat generation and operate within the maximum ratings given in this specification.

The operating current should be decided after considering the ambient maximum temperature of LEDs.

•CHEMICAL RESISTANCE

- 1) Avoid exposure to chemicals as it may attack the LED surface and cause discoloration.
- 2) When washing is required, refer to the following table for the proper chemical to be sued. (Immersion time: within 3 minutes at room temperature.)

SOLVENT	ADAPTABILITY			
Freon TE	\odot			
Chlorothene	\times			
Isopropyl Alcohol	\odot			
Thinner	\times			
Acetone	\times			
Trichloroethylene	\times			
\odot Usable \times Do not use.				

NOTE: Influences of ultrasonic cleaning of the LED resin body differ depending on such factors as the oscillator output, size of the PC board and the way in which the LED is mounted. Therefore, ultrasonic cleaning should only be performed after confirming there is no problem by conducting a test under practical.

•OTHERS

- 1) Care must be taken to ensure that the reverse voltage will not exceed the absolute maximum rating when using the LEDs with matrix drive.
- 2) Flashing lights have been known to cause discomfort in people; you can prevent this by taking precautions during use. Also, people should be cautious when using equipment that has had LEDs incorporated into it.
- 3) The LEDs described in this brochure are intended to be used for ordinary electronic equipment (such as office equipment, communications equipment, measurement instruments and household appliances). Consult PARA's sales staff in advance for information on the applications in which exceptional quality and reliability are required, particularly when the failure or malfunction of the LEDs may directly jeopardize life or health (such as for airplanes, aerospace, submersible repeaters, nuclear reactor control systems, automobiles, traffic control equipment, life support systems and safety devices).
- 4) User shall not reverse engineer by disassembling or analysis of the LEDs without having prior written consent from PARA. When defective LEDs are found, the User shall inform PARA directly before disassembling or analysis.
- 5) The formal specifications must be exchanged and signed by both parties before large volume purchase begins.
- 6) The appearance and specifications of the product may be modified for improvement without notice.
